Explanation of Medical Billing

For all medical services we provide, we will submit a claim to your Insurance Plan. It is extremely important that we have accurate information about your plan. After we receive the EOB (explanation of benefits form), we will determine the amount, if any, that you still owe. Your statements will reflect this amount.

Introduction

Medical insurance involves 3 common forms of payment to physicians. These are the **co-pay**, the **deductible** and the **co-insurance**.

The fee

Medical billing is called fee-for-service. The doctor provides services, and for each service, there is a fee (or a charge). The amount you owe is usually less than the full fee due to fee-reduction contracts between the doctor and your health insurance company. Contrary to what many people believe, insurance does not “cover everything”.

The co-pay

The co-pay is the amount of money that you owe up front for every doctor visit. Each insurance plan is different. The co-pay might vary in amount or there might be none. The co-pay needs to be paid in advance at the time of your visit. Some co-pays are as high as \$50.

The deductible

Many patients have an annual deductible. This is money that the insurance company will determine is owed to the physician, but that the patient has to pay. When a balance due is applied to your deductible, you owe this money to the practice. *See the example below.*

The co-insurance

This is the percentage of the fee that is owed to the practice based on your plan. The amount depends on what the insurance has approved for payment. You owe the co-insurance amount to the practice. *See the example below.*

Example using the above terms

You go to the doctor for a problem. The visit **fee** is \$150. Your **co-pay** is \$10 and this is paid at the time of the visit. A claim is filed with your insurance company. They approve a payment of \$100.00, but you have a 20% **co-insurance**.

The \$100 is what your insurance has **approved** for the full payment for this visit. You have already paid \$10 of this as your co-pay so the insurance owes \$90. You have a **co-insurance** of 20%, so they will only pay 80% of the \$90. Thus, they will pay only \$72. Your co-insurance is \$18. So you have paid \$28 total (\$10 co-pay plus the 20% or \$18 co-insurance) and your insurance has paid \$72.

If you have an unmet **deductible**, the insurance will “apply” the entire \$90 to your deductible. In this case, you owe the full \$90 (but your deductible has been credited or reduced by \$90).
