## NONINVASIVE PRENATAL TESTING FOR FETAL CHROMOSOMAL ABNORMALITIES

### The MaterniT21 PLUS test provides you with clear, powerful test results.

Our MaterniT21 PLUS test is a “noninvasive” approach to provide a high degree of accuracy for select chromosome information, without the risk of miscarriage associated with an invasive procedure. Using premier technology, information is unlocked with the ease of a blood draw.

This test uses cutting edge, state-of-the-art science. Results are reported simply, with a positive or negative result. Most results are available 7 business days after the sample is received in the laboratory.

The MaterniT21 PLUS test offers a powerful glimpse into the pregnancy by evaluating the relative amount of chromosomal material. Analysis of chromosomes 21, 18, 13, X, Y, or other additional information can be requested by your health care provider.

We offer this test for increased risk pregnancies with one or more of the following conditions:

Advanced maternal age

Personal or family history of chromosomal abnormalities

Fetal ultrasound abnormality suggestive of chromosomal abnormalities

Abnormal serum screening test

Please discuss all your prenatal testing options with your health care provider.

### ASK YOUR HEALTH CARE PROVIDER.

Print this sheet and bring it with you to your health care provider.

1 Who would I see in my health care provider’s office to discuss this test?

2 Am I far enough along in my pregnancy to be eligible for the MaterniT21 plus test?

3 Do I meet any of the indications for the MaterniT21 plus noninvasive prenatal test?

4 What are the limitations of this test?

5 What kind of information would this test tell me about my pregnancy?
